ICT - Creative iMedia Level 1/2 Certificate

AT A GLANCE	Format
	During the course students will complete four units related to producing and developing digital content including *pre-production skills*, and *creating digital graphics*, both of which are compulsory units. Two of the optional units may include sound production or video creation or photography or other units which develop students' creative and technical skills. Each coursework unit will take around a term to complete and will be assessed through a 10-hour task which will be marked by a teacher and then be moderated by the examination board. The written examination will last for 75 minutes and will account for one-quarter of the qualification marks.

Success Tips

- Students' planning and organisational skills will really help them to succeed; being methodical in managing their digital assets carefully (images, video, and sound files) through careful organisation will be essential.
- Digital content creation requires care and concentration so that what is produced is of a high standard and could be used in a professional context.
- Sticking to deadlines by carefully planning time will be of utmost importance.
- Preparing for the examination will require students to make clear notes on the topics which will be tested in the examination; this will include digital techniques and file handling, understanding of the relevant legislation, and production planning.
- Students will need to work outside of school time and therefore they must know how to access their files from their own school network area, or transfer files securely.

We would encourage students and parents to look at the specification:
